

Dow Corning®

2-3101 Antifoam Emulsion

Offering immediate defoaming action and long-lasting antifoaming effects.

Description: 2-3101 Antifoam Emulsion is a 20% active silicone emulsion and offers quick foam knock-down (immediate defoaming action) and long lasting antifoaming effect.

Applications: For aqueous systems in the chemical processing, agrochemicals, bottle filling operations, liquid detergents and cleaning products.

Features/Benefits:

- Fast-acting – Recommended for applications where quick foam knock-down is desired, e.g., bottle filling operations.
- Regulatory Compliance – The product complies with key chemical control laws and regulations, including US Food and Drug Administration (FDA), US Environmental Protection Agency (EPA) and German Federal Institute for Risk Assessment (BfR). See data sheet for additional regulations met.
- Long-lasting performance – Effective in controlling foam during end-use of formulated products, e.g., liquid cleaners.

About the Product: Foam control agents used on growing crops or post-harvest agricultural commodities must be EPA compliant. This means that agro product formulators, manufacturers and end users often may not be able to use an otherwise ideal foam-control agent simply because it is not approved for their intended use. In response, Dow Corning has introduced an EPA-approved, 20% active silicone antifoam emulsion that meets the performance demands of diverse agro applications. This emulsion is also ideal for controlling foam during product manufacturing as well as during end use.

- Immediate foam control action
- Persistent foam control action
- Easy to disperse in aqueous systems
- Highly efficient antifoam and defoamer at low concentration levels
