Siloxane Recycling Program

Description

We provide environment, health and safety leadership, capabilities and perspectives. In partnership with our employees, customers, neighbors and other interested parties, we proactively add value to business activities.

Put Dow Corning environment, health and safety experience to work for you. We offer an integrated package of toxicology, environmental and chemistry testing and consulting services to help you characterize and understand the safety profile of your products or chemicals. We can assist you with registration of your products or chemicals; and we can facilitate discussion of regulatory compliance with authorities to enable you to sell your products into specific geographies or markets. We can also help you begin a siloxane recycling program.

Benefits

Proven Solutions – Analytical Services and Development Centers are linked and connected with our Environment, Health and Safety Services to provide
