## Innovative Solutions

# Lubricating solutions for the highly competitive steel industry

## Dow Corning introduces cost-effective lubrication for the Indian steel industry

Indian steel manufacturers were seeking a cost effective “universal” lubricant that could be used in diverse applications in a steel foundry. The Dow Corning team in India was ready to offer a solution that would exactly meet that market’s need!

After considerable research, the team has found a grease that can be used in multi-purpose applications such as continuous caster, rolling mills, roll neck bearing, sinter plants, cooling beds, table roller-bearing, DRI kilns, slip seal, and so on. In addition, it provides excellent performance in varying operating conditions, such as high temperatures and corrosion.

“Our Indian customers who use the Molykote® G-0103 grease have been very successful in optimizing their operating costs: since this grease is multi-purpose, they are able to cut down on the variety of greases they use, thus reducing their inventory and therefore cost”, commented Alan Collins, Industry Commercial Manager for Dow Corning India. "This grease can be used equally effectively in areas of a steel plant that are subject to corrosion, high temperatures, heavy loads and shock loads”.

Dow Corning is a global leader in silicon-based technology and innovation, offering more than 7,000 products and services to over 25,000 customers worldwide. Dow Corning is equally owned by The Dow Chemical Company and Corning, Incorporated. More than half of Dow Corning’s annual sales are outside the United States.

In India, Dow Corning is one of the fastest growing specialty chemical companies. From their office in Mumbai and their new manufacturing site in Pune, they serve customers across India and South Asia. Dow Corning in India offers innovative solutions and products to industries as diverse as textiles, construction, beauty & personal care, automotive, industrial lubrication, electronics and many others.
